

Unit Testing

How do we know if our code works?

- Seriously, how do you know?

How do we test our
code?

Early Methods

- Print statements
- Random data
- Post your code on reddit/stackoverflow to get annihilated
- Ask chatgpt/claude

Test Driven Development

- Tests are written before their corresponding functions – [IBM](#)
- The Cycle
 - Write unit test
 - Write code
 - Run test
 - Rewrite code to pass test
 - repeat

Unit Testing in Python

- unittest
 - Built-in
- Pytest
 - External library

Unittest

- Standard built in
- Class based
- Assertions are methods using self
- Verbose

Pytest

- Third-party package
- Functions are bare assert
- Fixtures injected as arguments

So... which one?

- Depends
 - Team
 - Dependency allowance
