

UML

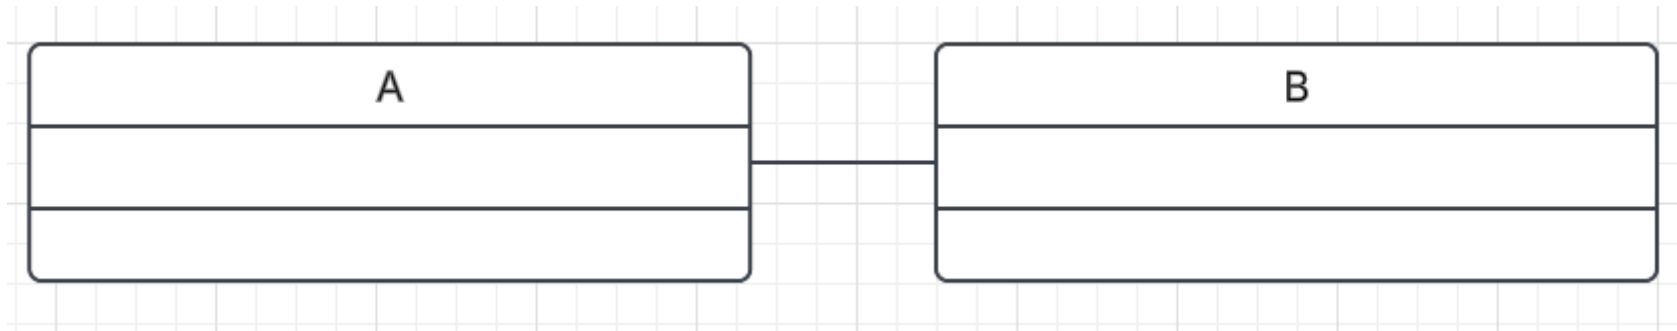

Class

- Properties or attributes at the top
- Methods or operations at bottom
 - indicates public, - indicates private, # indicates protected

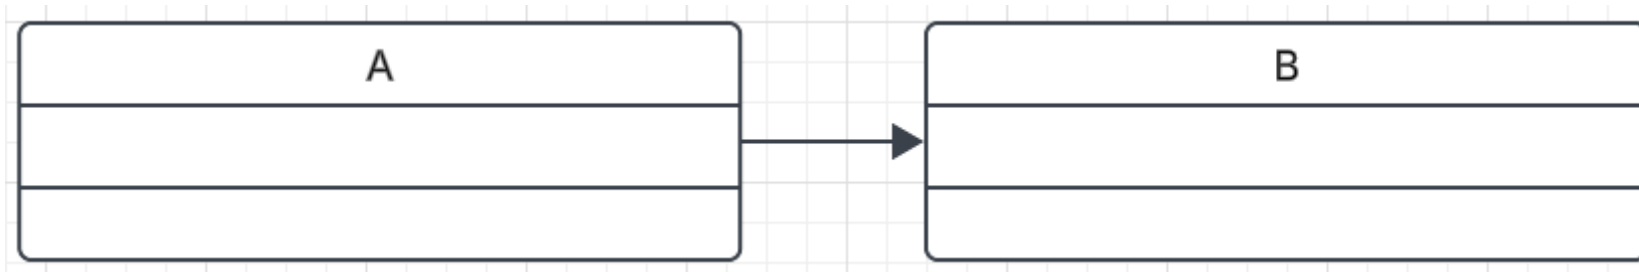

Association

- A and B call each other

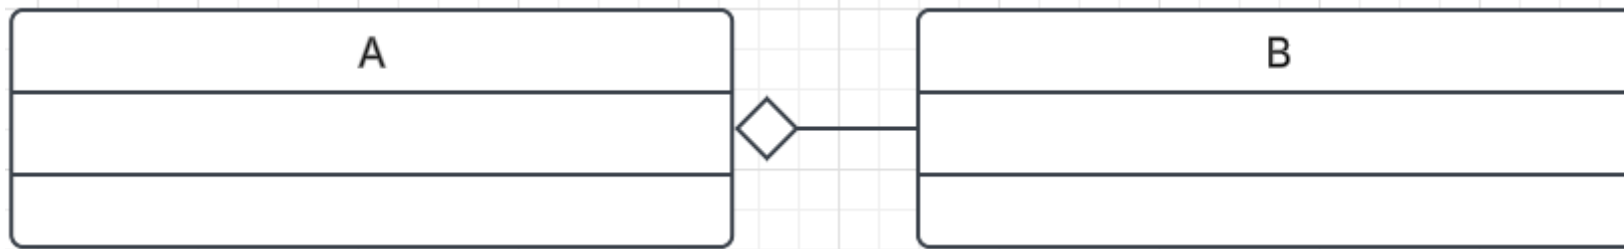

One way association

- A can call B's properties/methods, but not vice versa

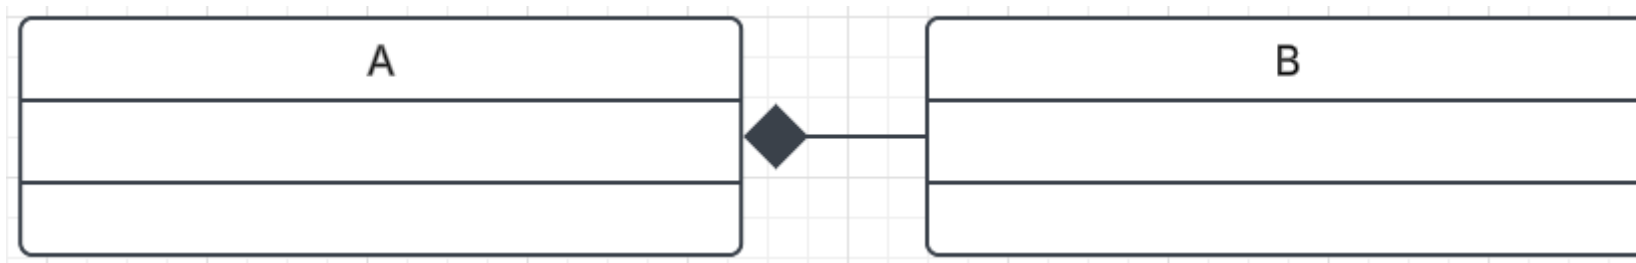

Aggregation

- A has 1 or more instances of B. B can survive if A is disposed

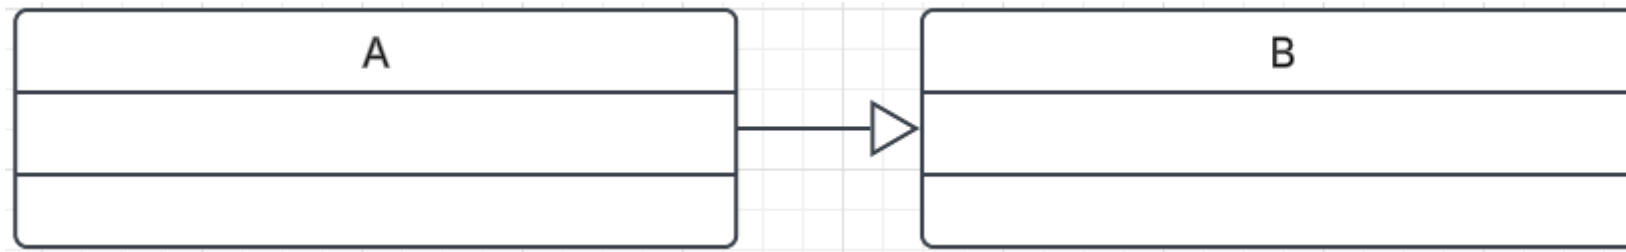

Composition

- A has 1 or more instances of B. B cannot survive if A is disposed

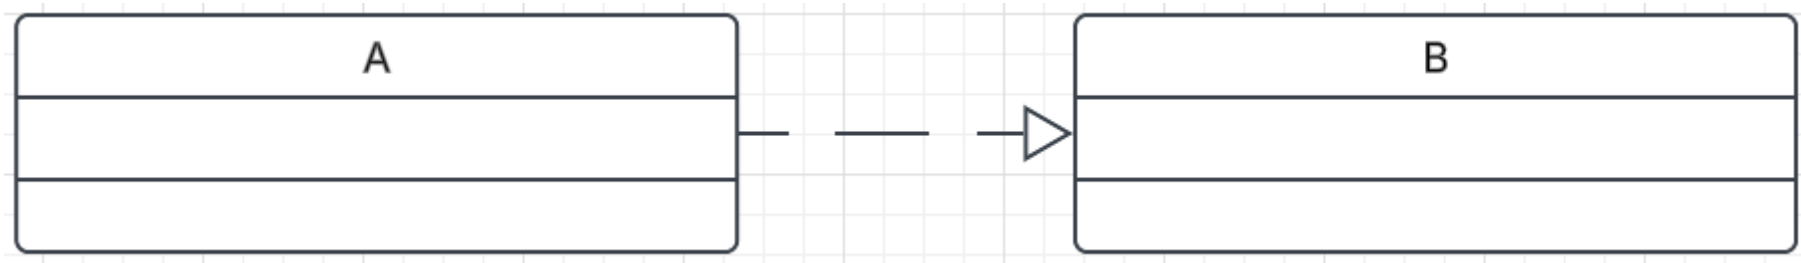

Inheritance

- A inherits from B
- demonstrates an "is a" relationship
- B is a generalization

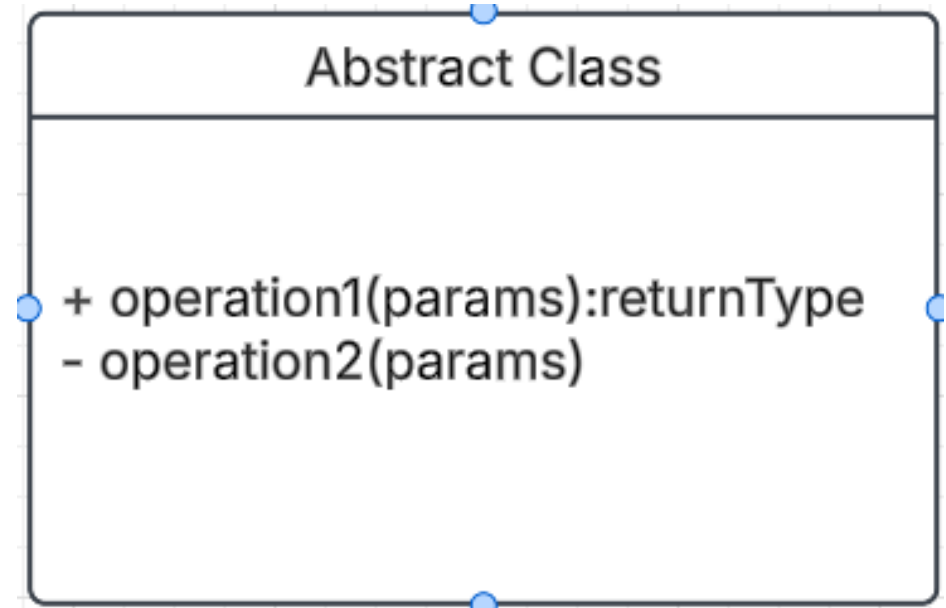

Implementation/realization

- A is a concrete implementation/realization of B
- Think how a play button operates differs on various streaming platforms

Abstract Class

- Abstract methods marked with comments or "abstract
methodName(): returnType"
- <abstract> above name of class

Interface

- Name written underneath `<interface>` annotation. Methods underneath
